SUMMARY

Computer engineer and working student at Nokia, with a foundation in physics, electrical engineering and computer architecture and hands-on experience in C++, Java/Spring Boot, Python and React. Full-stack and backend focus, complemented by cloud and DevOps (AWS, Terraform, Docker, CI/CD), AI integration and IoT. Quick to learn new technologies and comfortable owning a feature from design to deployment.

EXPERIENCE

Working Student (Software Engineer) — Nokia · Timișoara — Aug 2025 – Present

- Develop features and carry out maintenance work in C++, including investigating defects to determine whether the root cause lies in our code or in an external component.
- Implement code improvements, usually non-functional (refactoring, cleanup).
- Verify every change with C++ unit tests and Python software component tests (SCTs) to confirm the code adheres to specifications.
- Keep code-related documentation up to date using reStructuredText.

Assistant Analyst — DevPlant · Timișoara — Jun 2024 – Jun 2025

- Developed and maintained Spring Boot backend services.
- Contributed to AWS infrastructure defined as code with Terraform.
- Built a complete Python backend for automated invoice sending.
- Upgraded and modernized a large React project to current technologies.
- Developed a browser extension for managing application performance results.

PROJECTS

AI Contract Risk Analyser — Bachelor's thesis
Kotlin, Java, Spring Boot, Python, PostgreSQL, pgvector, Milvus, LangChain, Hugging Face

- AI-assisted system that extracts contract clauses, maps relationships between them, flags risks and produces structured analysis.

Smart Medicine Dispenser System
Kotlin, Jetpack Compose, Spring Boot, PostgreSQL, Firebase Auth, OpenAI API, Raspberry Pi 5

- Medication system combining an Android app, a REST backend, AI-assisted adherence analysis and a physical Raspberry Pi 5 dispenser.

Smart Reminder — Mobile app
Flutter, Dart, Java, Spring Boot, PostgreSQL, Redis, Firebase Auth

- Location-, time- and Wi-Fi-based reminders using Android background services, notifications and a REST API backend.

Self-hosted Homelab Infrastructure
Raspberry Pi, Debian, Docker, Portainer, Pi-hole, Nginx Proxy Manager

- Containerized services behind a reverse proxy with subdomains and network-wide ad blocking.

Website for Asociația Valea Mureșului
HTML, CSS, JavaScript, Firebase Hosting, Authentication, Firestore

- Presentation website for a cultural association with dedicated dance and football sections.

Other projects

- Banking web app with database and message broker · Contract-generating web app (containerization and deployment) · Version control system with file snapshots and change tracking · Smart irrigation system on Raspberry Pi · Browser extension for video downloading · Image-processing automation scripts with OpenCV

TECHNICAL SKILLS

Languages	Java, C++, Python, Kotlin, Dart, JavaScript, TypeScript, C#
Backend	Spring Boot, Node.js, REST APIs, OpenAPI/Swagger, Firebase Authentication
Frontend / Mobile	React, Flutter, Android (Kotlin), HTML, CSS
Data	PostgreSQL, MySQL, Redis, Firestore, pgvector, Milvus
Cloud / DevOps	AWS, Terraform, Docker, Docker Compose, Kubernetes, GitHub Actions, Linux (Debian), Nginx
AI / ML	PyTorch, OpenAI API, LangChain, Hugging Face, OpenCV
IoT	Raspberry Pi, GPIO and sensor integration
Tools	Git, GitHub, Postman

EDUCATION

Politehnica University of Timișoara — M.Eng., Digital Media and Web Development — 2026 – Present

Politehnica University of Timișoara — B.Sc., Computers and Information Technology (English programme) — 2022 – 2026
Faculty of Automation and Computers

National College "Preparandia – Dimitrie Țichindeal", Arad — Mathematics and Computer Science — 2018 – 2022

VOLUNTEERING

DevOps — Google Developer Student Club
Deployed the team's application to a Kubernetes cluster.

Cloud SecOps — Eviden · AC Labs

COURSES & LANGUAGES

Terraform for AWS – Beginner to Expert (Udemy)
Advanced Programming Techniques (UPT)
IC3 (Certiport)

English professional working (B2) · **Romanian** native
